1 General

1.1 Bug fixes and other adjustments

1.1.1 Improved presentation of umlauts and special characters in automation emails

Automation

Option: Publishing Automation Package

Automation is a function integrated into the **'GRIPS Matrix'** that monitors a defined address range in the **'GRIPS Matrix'** or an external directory and triggers further steps whenever changes are detected.

If an IU or IU status is changed within the monitored address range, this can trigger a publication or issue translation orders.

If a file is changed or newly added to an external directory, the import of GRIPS data or loading of a translation can be triggered.

All defined automations (defined tasks that are automatically completed) can be timed and triggered repeatedly at specified intervals.

Task monitoring and execution is handled by the **'GRIPS Manager'** service. All executed automations are documented and summarized in a log. Optionally, a summary can be sent by email after each execution. (When importing files / loading translations, logging and email sending occurs for each file individually, if applied.)

Emails sent as part of automation will be improved in their presentation as of **'GRIPS'** Version 2024.01 Build 01. As a result, umlauts and other special characters will always be displayed correctly.

2 'GRIPS Matrix'

2.1 Change descriptions

2.1.1 Integrate Info Type Editors using the web browser view

Info Type Editors

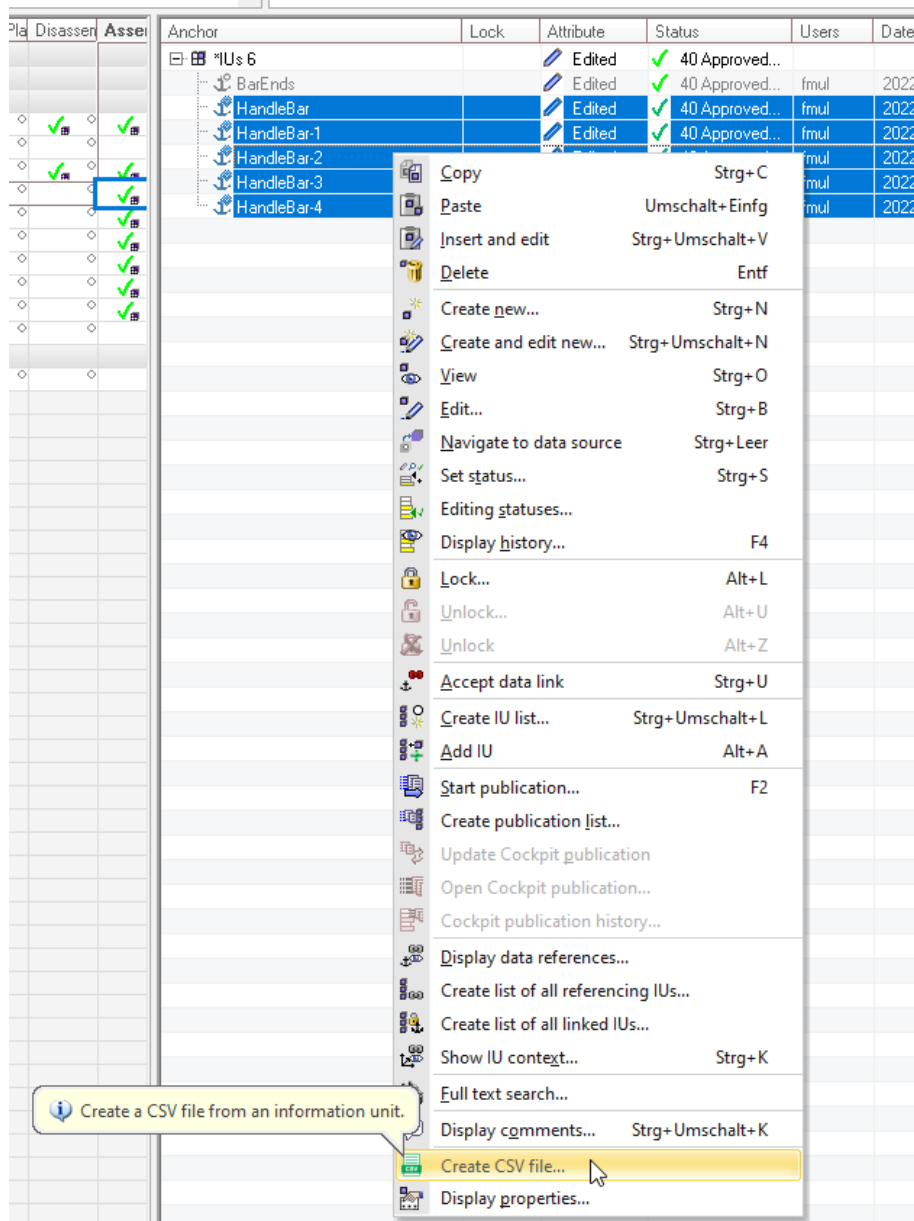

For diverse functionalities and to support editorial activities in GRIPS, additional *Info Type* Editors can be developed and connected. They allow for subject-specific optimized data entry.

The following are available default Info Type Editors:

- **'GRIPS Image Editor'**
Info Type Editor for displaying images with graphic objects (e.g., position numbers).
- **'GRIPS Document Editor'**
Info Type Editor for the simple handling of documents that are not generated from GRIPS in the form of *information units* . In this way, the documentation for product components from suppliers can be integrated into the GRIPS project.

Such Info Type Editors can also be displayed using a web browser function within **'GRIPS'** as of **'GRIPS'** Version 2023.04 Build 04. For the further development of **'GRIPS'**, this provides us with additional flexibility in configuring the user interface when it comes to data collection by our customers' technical writers.

2.1.2 Display of dialog data in CSV format (Request for Feature)

CSV (Comma-Separated Values) format is a widely used format for displaying and exchanging data, using **Microsoft**® Excel, for example. As of '**GRIPS**' Version 2024.01 Build 01, there is now the option in various dialogs and in the '**GRIPS Matrix**' IU anchor context menu to export the displayed data as a CSV file.

	A	B	C	D	E	F	G	H	I	J	K
1	Anchor	Lock	Attribute	Status	Users	Date	Layer link	Language	Comments		
2											
3	[IUs6]	Not locked	Edited	40	Approved (*)		Yes	No			
4	HandleBar	Not locked	Edited	40	Approved	fmul	#####	Yes	No		
5	HandleBar-1	Not locked	Edited	40	Approved	fmul	#####	Yes	No		
6	HandleBar-2	Not locked	Edited	40	Approved	fmul	#####	Yes	No		
7	HandleBar-3	Not locked	Edited	40	Approved	fmul	#####	Yes	No		
8	HandleBar-4	Not locked	Edited	40	Approved	fmul	#####	Yes	No		
9											

After the **'Create CSV file...'** button is clicked, the data is written to a temporary file in the `<WindowsUser>\AppData\Local\Temp\Grips` folder and then automatically opened with the program configured for CSV files in **Microsoft®** Windows.

The **'GRIPS'** system is more flexible as a result and allows for fast and simple data exchange by means of Excel/CSV. Below is a list of the dialogs where the button for generating CSV files has been incorporated:

- IU import - project: <project name>
- Full Text Search - Project: <project name>
- Order Translation - Project: <project name>
- Import Translation - Project: <project name>
- Check/cancel translation - Project: <project name>
- Data References - Project: <project name>
- Publish - Project: <project name>
- Publication Definition - Project: <project name>
- IU List - Project: <project name>

3 'GRIPS Manager'

3.1 Bug fixes and other adjustments

3.1.1 Optimizations for importing axis entries

In the **'GRIPS Manager'**, there is the option to import axes into a **'GRIPS'** project. With **'GRIPS'** Version 2024.01 Build 01, this functionality has been optimized; log messages, for example, have thereby been further improved.
